C-112 - 549/63
26 August 1963

MEMORANDUM FOR: Chief, ADCP/INRIB Division, OSI

ATTENTION :

FROM :

Chief, CIA/PID (NPIC)

SUBJECT :

Security at Possible Plutonium Production Facility near
Pao Tau, China

REFERENCE :

Requirement No. C 13-80,405 (Project No. C 1031-63)

1. In further study of Requirement No. C 13-80,405 (C 1031-63), it is noted that two possible guard posts, not previously reported at the possible Plutonium Production Facility, are located at the NE and SW entrances to the plant.

2. These guard posts are in addition to the four guard towers located at each corner of the enclosure. (Reported in Memorandum CMB 526/63, 20 August 1963). The SW post is located between the two administration buildings on the main road running through the installation. The NE post is located on the same road at the opposite end of the installation. It appears that neither post would contain more than two sentries. The entrances or openings along the NE side of the plant are most likely guarded, but no sentry facilities are noted.

3. The photo analysis on this project was performed by [redacted] CIA/PID/CMB (NPIC), who may be contacted on [redacted] for any additional information.
